Typical P-coating for BBO SHG@800 nm application

Typical coating for BBO THG@800 nm or SHG@532 nm applications (output face P@266 nm)

Typical coating for BBO SHG@532 nm application (input face P@532 nm)

P-protective coating. It's a single or two layers antireflection coating made at specified wavelength range. Typical reflection values are R≈2% in the mid range, R<4% at the edges. P coating is recommended for ultra-short pulses applications and features low dispersion.
