

Multifunction Test and Measurement System

Optoplex's Multifunction Test and Measurement System (TM100 Series) is designed to provide a flexible and cost effective optical test and measurement solution, particularly for manufacturing lines. The mainframe can be mounted in 19" rack or stationed on desk-top for ease of use. There are many selections of the pluggable modules, from tunable laser, optical spectrum analyzer, EDFA, power meter, ASE light source, optical tunable filter, optical performance monitor, ..., etc.

- Broad selection of pluggable measurement modules
- Smart display and friendly GUI, enabling user configurable test setup via selected modules
- Programmable test & measurement recipes – ideal for manufacturing line
- Remote interface: GPIB, USB, Ethernet and WiFi

Key Features and Benefits

- Mainframe with smart display and friendly GUI
- Built-in WiFi and Bluetooth
- Many selections of pluggable modules
- User configurable test setup with selected pluggable modules
- Smart and intelligent data management
- Independent access to pluggable module
- Cost-effective

Applications

- Optical component characterization
- WDM component and module manufacturing line test
- Semiconductor laser manufacturing line – screening test
- GPON test and manufacturing
- Transceiver test and measurement
- Optical amplifier in transmission line measurement
- Fiber sensing system T&M
- Optical spectroscopic instrumentation T&M

Mainframe

The mainframe is a standard 19" box either for rack-mount or for desk-top. A 7" touch-screen is built-in for ease of use the measurement system. A friendly GUI is designed such that user can easily configure their test setup and test conditions based on their selected pluggable measurement modules. The user can save the recipe of the setup and settings such that operators can easily load and run it next time. This is convenient and useful for manufacturing line test and measurement.

The interfaces include GPIB, USB, Ethernet and WiFi. Remote control of the test and measurement and display of the measurement results can be done via Ethernet or WiFi.

Pluggable Measurement Modules

There is a broad selection of pluggable modules. They include

- Tunable Lasers: C-Band, L-Band, S-Band, O-Band
- ASE Light Sources: C-Band, L-Band
- Comb Light Sources: 100GHz, 50GHz and 25GHz; C- or L-Band
- Optical Spectrum Analyzers: C-, L-, C+L, O-, and Full-Band (1250 ~ 1650nm)
- Optical Performance Monitor/Optical Channel Monitor: C-Band; 100GHz or 50GHz
- Optical Tunable Filters: C-, L-, C+L, S-, O-, and Full-Band (1250 ~ 1650nm)
- EDFA: C- or L-Band, +20dBm max output
- Optical Power Meters:
- Optical Switch:
- Optical Attenuators:
- Optical Rulers: 100GHz, 50GHz and 25GHz

Tunable Lasers

Tunable Specifications

Model	TM100-101	TM100-102	TM100-103	TM100-104	TM100-105
Operating Wavelength	C-Band	L-Band	S-Band	O-Band	
Output power	8-14dBm	8-14dBm	8-14dBm	8-14dBm	
SMSR	40-45dB	40-45dB	40-45dB	40-45dB	
Linewidth	1-5MHz	1-5MHz	1-5MHz	1-5MHz	
RIN (10MHz-1GHz) (1-10GHz)	-110 dB/Hz -145 dB/Hz	-110 dB/Hz -145 dB/Hz	-110 dB/Hz -145 dB/Hz	-110 dB/Hz -145 dB/Hz	
OSNR	50	50	50	50

Note

1) *Other performance refers to the ASE light source for the corresponding operating wavelength.*

ASE Comb Light Source is an ideal light source for simultaneous test and measurement of multi-channel optical components, modules and systems, such as DWDM.

Optical Spectrum Analyzers

In addition to pluggable OSA used in conjunction with Optoplex's T&M system, TM100. Optoplex has stand-alone OSA products, from OEM modules to handheld OSA.

OSA OEM Modules:

Optical Performance Monitor (OPM) /Optical Channel Monitor (OCM)

Optoplex has been a leading manufacturer and supplier of Optical Performance Monitor (OPM) and Optical Channel Monitor (OCM) for telecom applications. More than 15,000 units of OPM/OCM have been deployed world-wide in the past 10 years.

The pluggable OPM/OCM is a variant of Optoplex's famous OPM/OCM OEM modules, specially designed for use in conjunction with Optoplex's TM100 system. It has the same performance as those stand-alone OEM modules.

Model		TM100-601	TM100-602	TM100-603	TM100-604
Parameter	Unit	C-Band	C-Band	L-Band	L-Band
Channel Spacing	GHz	50	100	50	100

Tunable Optical Filters (TOF)

Like OPM/OCM, Optoplex is a leading manufacturer and supplier of tunable optical filters (TOF) for DWDM optical communications. Major products include 100GHz and 50GHz channel spacing TOFs.

In addition to the TOF based on DWDM thin film filter (TFF) and rational motor, Optoplex has MEMS-Grating based TOF products as well.

Recently, a new TOF based on fiber F-P etalon is released.

Those new TOFs based on MEMS and fiber F-P are designed for continuous tuning as well as channelized for DWDM applications. Custom-design of TOFs is available upon request.

Fiber Type		9/125 mm single mode			

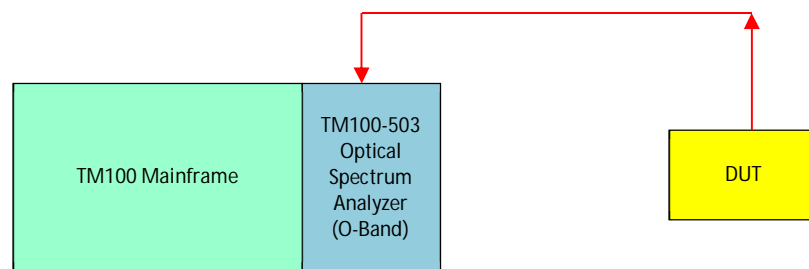

Test & Measurement Applications (Examples)

Optical Component Characterization

Using tunable laser and power meter to test optical component's characteristics, such as transmission or reflection spectrum, insertion loss, bandwidth, etc. Such as to test a DWDM filter.

Laser Diode Screening Test

Fast scanning OSA (O-band or C-band) is an ideal instrument used in DFB laser diode (wafer level) screening test to measure the SMSR. With scanning speed as high as 50ms, it can dramatically improve the measurement cycle time and therefore the throughput.

It is a low-cost replacement to expensive Agilent or Yokogawa's OSA for dedicated manufacturing line test and measurement applications.

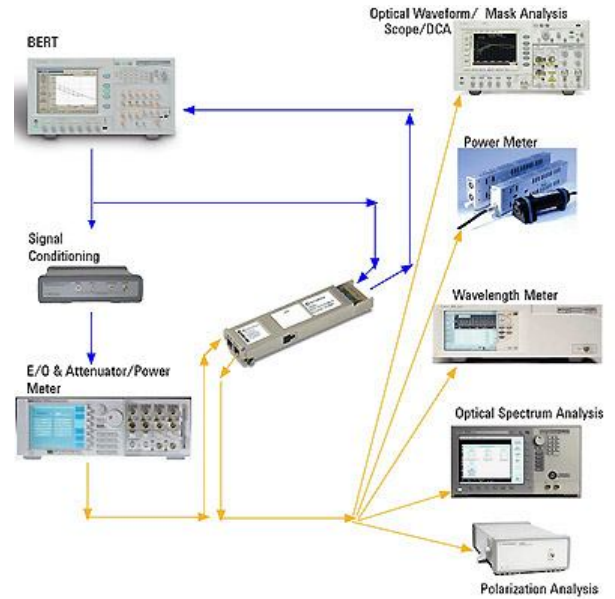

Optical Transmitter and Fiber Amplifier Measurements

Transceiver Measurement

Optoplex's TM100 measurement systems, in conjunction with pluggable modules, such as VOA, Power Meter, OSA,, is a good solution for optical transceiver test and measurement.
